A strong user interface coupled with unparalleled functionality makes Cyclope Enterprise Print Manager an industry leading printer management software package.

Cyclope Enterprise Print Manager allows clients to monitor, record and report individual usage within their printer network. From recording data about the employee commissioning each print, to the number of pages in each print job, effective print management is made easy, thanks to Cyclope Enterprise Print Manager. The far reaching tracking capabilities controlled from a single, central control panel allow users to actively engage with the aggregated period statistics and ensure strict network printer control. Cyclope Enterprise Print Manager records all the details of printing jobs across the monitored network, whilst acting to promote efficiency through highlighting particular areas of concern or improvement from a cost perspective.

The Cyclope Enterprise Print Manager interface is a particular strong point, designed firmly with the end user in mind. The interface can be accessed from any location within the local area network by the administrator, delivering accurate aggregated statistics where and when they are required. Encompassing all users and printers, Cyclope Enterprise Print Manager allows the user to analyse at a glance efficiency over a specified period of time, and allows effective monitoring of each cost centre with a view to reducing printer costs and increasing profits. The in-built cost calculator calculates the cost for each printed document based on user's initial cost per page input, allowing for accurate apportionment of total printer costs amongst staff and each networked printer.

The reporting function of Cyclope Enterprise Print Manager generates reports on each monitored printer and user. Accessible from the central control panel, the reports can even be sent to a specified address to ensure greater availability of information as and when it is required.

Encompassing tracking, logging and documenting functions, Cyclope Enterprise Print Manager is an all-inclusive print management software package presenting the ease of use and flexibility necessary to run and successfully monitor printers and users within a dynamic organisation.
